

PSYCHOLOGY

Psychology is the scientific study of thoughts, feelings, actions, perceptions, physiological and neurological responses, and other behaviours in animals and humans. As both a scientific discipline and a profession, psychology relates to virtually every aspect of people's lives. Through research, psychology plays an integral role in understanding and predicting human behaviour. Through clinical practice, psychology strives to help people live more productive and fulfilling lives.

ADMISSIONS

Applications for admission to most programs are accepted starting Oct. 1 each year for programs that begin in August or September of the following year. Check the website complete details on admissions processes:
