

## TRUSU:

- Cost recovery model for new programs- essential to keep the best and brightest on our campus
- Dedicated research spaces for undergraduate students- could encourage more students to take part in research
  - Have them located in areas where students can have access to faculty they're working with
  - Have the tools necessary to work on particular things- systems, dedicated software, statistics programs available on more computers across campus
  - No one really knows about the Undergraduate Research Commons
- Arts students aren't aware of research opportunities that are available to them, make sure Arts faculty are promoting these opportunities
  - Research is kind of awkwardly incorporated into the 4<sup>th</sup> year curriculum, find a way to make it less awkward
- Undergraduate Research Ambassadors need to be at all of the events on campus- Study Abroad Ambassadors do a great job of this, continue to work up to their level
- A lot of value in both a curricular and co-curricular perspective on research opportunities
- Specializations for Master's programs. Ex. MBA doesn't have a specialization- finance, marketing, etc.
- In MBA there are a lot of students applying to the research route, has got to the point where they have had to start turning down students from this opportunity.
  - Need more approved professors to supervise students wanting to do research
  - Professors are not being recognized for being supervisors, need to be rewarded in some sort of way to encourage them to supervise
- Post- Graduation work experience- Co-op style program for Master's students
- Find a place for TRU to be really top of the line in our research, a niche research campus in BC
- Research centers on campus are not very visible, you don't really hear about them after their public launch
- Library resources
- Student Researcher payment- need to make sure that is more streamlined and students aren't waiting 6+ weeks for first payment
- Work towards having Master's programs for the Bachelor's programs we offer
- Find out from students what kind of Master's programs they would like to see, what kind of program would make them consider staying at TRU?
